Performance quoted represents past performance. Current performance may be lower or higher than average annual returns shown.

The Dutch domiciled ETFs use a gross reinvestment index as opposed to many other ETFs and investment funds that use a net reinvestment index. Comparing with a gross reinvestment index is the purest form since it considers that Dutch investors can deduct or reclaim the dividend tax levied. Please note that the performance includes income distributions gross of Dutch withholding tax because Dutch investors can deduct or reclaim the 15% Dutch withholding tax levied. Different investor types and investors from other jurisdictions may not be able to achieve the same level of performance due to their tax status and local tax rules.

Returns may increase or decrease as a result of currency fluctuations.

\*Periods greater than one year are annualised.

#### **Yields**

12-Month Yield<sup>1</sup>

<sup>1</sup>The 12-Month Yield is the yield an investor would have received if they had held the fund over the last 12 months assuming the most recent NAV. The 12-month yield is calculated by summing any income distributions over the past 12 months and dividing by the sum of the most recent NAV and any capital gain distributions made over the past 12 months. The dividend paid may differ from the dividend yield of the index by increasing or decreasing the fund. A part of the dividend can be reinvested whereby this is processed in the price and not paid out.

## **Key Risks**

While the diversification in a multi-asset strategy reduces risk, it is important to remember that all investments carry some risk. The Multi-Asset Funds by VanEck are subject to the four risks below:

**Property Risk:** Investments in real estate securities can be affected by the general performance of stock markets and the property sector. Interest rate changes, in particular, can have a negative impact.

**Interest Rate Risk:** Increases in interest rates have a significant impact on the value of fixed-income securities issued by governments and companies. Potential or actual downgrades in credit ratings can also impact prices. This is another risk factor of a Multi-Asset ETF.

Market Risk: The value of stocks depends on daily market fluctuations. Other factors that influence them include political and economic news, company results and material corporate events.

Credit Risk: If the issuer of a bond is unable to pay interest or repay capital, the value of that bond will fall.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on www.vaneck.com.

The Index Administrator shall not be liable (whether in negligence or otherwise) to the parties or any other person for any error in the Index, and the Index Administrator is under no obligation to advise the parties or any person of any error therein.

The Index Administrator makes no representation whatsoever, whether express or implied, as to the advisability of, the ability of the Index to track relevant markets' performances, or otherwise relating to the Index or any transaction or product with respect thereto, or of assuming any risks in connection therewith. The Index Administrator has no obligation to take the needs of any party into consideration in determining, composing or calculating the Index. No party, nor the Index Administrator, shall have any liability to any party for any act or failure to act by the Index Administrator in connection with the determination, adjustment, calculation or maintenance of the Index.

It is not possible to invest directly in an index.

Performance quoted represents past performance. Current performance may be lower or higher than average annual returns shown.

The Dutch domiciled ETFs use a gross reinvestment index as opposed to many other ETFs and investment funds that use a net reinvestment index. Comparing with a gross reinvestment index is the purest form since it considers that Dutch investors can reclaim the dividend tax withheld. Please note that the performance includes income distributions gross of Dutch withholding tax because Dutch investors receive a refund of the 15% Dutch withholding tax levied. Different investor types and investors from other jurisdictions may not be able to achieve the same level of performance due to their tax status and local tax rules. Returns may increase or decrease as a result of currency fluctuations. Investors must be aware that, due to market fluctuations and other factors, the performance of the ETFs may vary over time and should consider a medium/long-term perspective when evaluating the performance of ETFs.

Investing is subject to risk, including the possible loss of principal. Investors must buy and sell units of the UCITS on the secondary market via a an intermediary (e.g. a broker) and cannot usually be sold directly back to the UCITS. Brokerage fees may incur. The buying price may exceed, or the selling price may be lower than the current net asset value. The indicative net asset value (iNAV) of the UCITS is available on Bloomberg. The Management Company may terminate the marketing of the UCITS in one or more jurisdictions.
