Fund Description

Oil currently represents a large chunk of the global energy consumption and its relevance is projected to remain high also for the decades to come, as the world's energy demand increases. The events of 2022 have strengthened the case for oil as a mean to ensure energy security and to help gradually carry out the energy transition towards a zero-carbon economy. VanEck Oil Services UCITS ETF enables an investment in the upstream oil sector.

The MarketVector™ US Listed Oil Services 10% Capped Index tracks the performance of the largest and most liquid US companies in the oil services industry.

Key Risks

Risk of Investing in the Oil Industry: An Oil ETF will be sensitive to, and its performance will depend to a greater extent on, the overall condition of oil services companies. The profitability of oil services companies is related to worldwide energy prices, including all sources of energy, and exploration and production spending. The price of energy, the earnings of oil services companies, and the value of such companies' securities are subject to significant volatility. Oil services companies are also subject to risks of changes in exchange rates and the price of oil and gas, changes in prices for competitive energy services, changes in the global supply of and demand for oil and gas, government regulation, the imposition of import controls, world events, negative perception, depletion of resources and general economic conditions, development of alternative energy sources, energy conservation efforts, technological developments and labor relations, as well as market, economic, social and political risks of the countries where oil services companies are located or do business. Oil services companies operate in a highly competitive and cyclical industry, with intense price competition.

Risk Associated with Fossil Fuels: Performance of the companies involved in the fossil fuels sector may be affected by a number of factors, including changes in commodity prices, supply and demand for fossil fuel products or services and exploration, equipment, services and production costs. Many regions that produce fossil fuel, or in which pipes for transporting fossil fuel are located, are politically volatile and conflicts in these regions could result in spikes in fossil fuel prices. In addition, companies in the fossil fuel sector may have significant operations in areas at risk of natural disasters (including physical changes as a result of climate change), social unrest, major terrorist attacks and environmental damage all of which could also increase market volatility. These companies may also be at risk of discharging the costs of cleaning up accidents, civil liabilities, taxes, governmental regulation on privatization, pricing and supply and other intervention, as well as other social and governance factors.

Regulatory Risk: Changes to the existing regulation or the development of new rules might negatively impact the value of an investment in the oil industry. Moreover, the ongoing transition towards renewable energy sources might accelerate a shift in the regulatory environment, thus affecting companies involved with oil and fossil fuels. This is a factor to consider before investing in an Oil ETF.

Concentration Risk: The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. Accordingly, an Oil ETF may be subject to the risk that economic, political or other conditions that have a negative effect on a particular industry or sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on www.vaneck.com.

IMPORTANT INFORMATION

This is a marketing communication. Please refer to the prospectus of the UCITS and to the KID before making any final investment decisions.

This information originates from VanEck (Europe) GmbH, which has been appointed as distributor of VanEck products in Europe by the Management Company VanEck Asset Management B.V., a UCITS Management Company incorporated under Dutch law and registered with the Dutch Authority for the Financial Markets (AFM). VanEck (Europe) GmbH, with registered address at Kreuznacher Str. 30, 60486 Frankfurt, Germany, is a financial services provider regulated by the Federal Financial Supervisory Authority in Germany (BaFin). The information is intended only to provide general and preliminary information to investors and shall not be construed as investment, legal or tax advice. VanEck (Europe) GmbH and its associated and affiliated companies (together "VanEck") assume no liability with regards to any investment, divestment or retention decision taken by the investor on the basis of this information.
