

KEY INVESTOR INFORMATION

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

VanEck iBoxx EUR Sovereign Diversified 1-10 UCITS ETF (the "Fund")

a sub-fund of VanEck ETFs N.V. (the "Company")

ISIN: NL0009690254

This Fund is managed by VanEck Asset Management B.V., a subsidiary of Van Eck Associates Corporation.

Objectives and Investment Policy

Through a combination of capital growth and income from the Fund's assets, the Fund seeks to achieve a return on your investment which mirrors the market of euro-denominated investment-grade bonds. The Fund seeks to achieve a return on your investment that mirrors the yield of the Markit iBoxx EUR Liquid Sovereign Diversified 1-10 Index, the Fund's reference index (Index).

The ETF is passively managed and invests in the underlying (physical) securities that make up the index and does not lend the underlying securities out to third parties.

To the extent possible and practically feasible, the Fund aims to invest in fixed-income securities that are part of the Index and which meet its credit rating requirements. If the credit ratings of the fixed-income securities are downgraded, the Fund can continue to hold these securities until they are no longer included in the Index and it is practically feasible to sell them.

The Markit iBoxx EUR Liquid Sovereign Diversified 1-10 Index consists of approximately 25 of the largest and most liquid euro-denominated government bonds with a remaining term to maturity of 1.25 to 10.5 years. The index only includes investment grade bonds with an outstanding amount of at least 2 billion euros.

In addition to all the fixed-income securities included in the reference index, the Fund can also invest in other fixed-income securities that offer a return comparable to that of certain securities from the index. This policy is in the

investor's interest and ensures that the yield of the Markit iBoxx EUR Liquid Sovereign Diversified 1-10 Index is replicated as closely as possible.

Income from the Fund's investments is paid out as dividend. There is the possibility of dividend 4 times per year, but the height of the dividend to be paid out must also be considered. It may be the case that the income from the coupon is relatively low in a particular quarter, which means that from a cost perspective, it makes more sense to keep the income in the Fund until the next payment opportunity.

The Fund may not invest more than 10% of its Net Asset Value in open-ended collective investment schemes.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 3 years.

- Fund's base currency: Euro
- Distribution policy: Income distributed

The shares are admitted for trading on various stock exchanges and can be traded on the secondary market. The price of the shares offered on the secondary market may deviate from the net asset value of the shares. The return of the Fund is directly related to the return of the underlying assets minus the costs associated with the Fund. If the performance of the underlying assets decreases, the performance of the Fund will also decrease. There is no capital protection against Market Risk.

Risk and Reward Profile

The risk and reward indicator is calculated using historical and simulated historical data. Historical data may not be a reliable indication for the future. Therefore, the risk classification may change over time.

Even if the Fund is in the lowest risk category, it does not mean it is risk free or that capital is guaranteed or protected.

This Fund is ranked at 4 because funds of this type have experienced high rises and falls in value in the past.

The following risks can be materially relevant but are not necessarily adequately captured by the synthetic risk indicator and may cause additional loss:

- **Credit Risk:** The issuer or guarantor of a debt security may be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honour its obligations. Bonds are subject to varying degrees of credit risk which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase, which may adversely affect the value of the security.
- **Liquidity Risks:** Exists when a particular financial instrument is difficult to purchase or sell. If the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous or reasonable price, or at all.
- **Interest Rate Risk:** Bond prices could rise or fall as the result of changes in the interest rates and the interest rate curve. Potential or actual downgrades in the credit rating can increase the assumed risk level.

For more information on risks, please see the "Risk Factors" section of the Fund's prospectus, available on www.vaneck.com.
