

# Gold Ready to Cushion Hard Landing

By Joe Foster, Portfolio Manager

## VanEck International Investors Gold Fund

INIVX / IIGCX / INIIX / INIYX

### Fund Review

VanEck International Investors Gold Fund's Class A shares (the "Fund") returned 17.80% for the one month period ending June 30, 2019 (excluding sales charge), while the NYSE Arca Gold Miners Net Total Return Index (GDMNTR)<sup>1</sup> returned 19.07% for the same period.

#### Average Annual Total Returns (%) as of June 30, 2019

	1 Mo <sup>†</sup>	1 Yr	5 Yr	10 Yr
Class A: NAV (Inception 2/10/56)	17.80	8.59	-1.60	-0.69
Class A: Maximum 5.75% load	11.07	2.35	-2.76	-1.28
GDMNTR Index	19.07	16.02	0.35	-2.78

#### Average Annual Total Returns (%) as of March 31, 2018

	1 Mo <sup>†</sup>	1 Yr	5 Yr	10 Yr
Class A: NAV (Inception 2/10/56)	-2.42	-5.21	-1.01	-1.44
Class A: Maximum 5.75% load	-8.08	-10.70	-2.16	-2.02
GDMNTR Index	0.75	3.06	-0.07	-3.85

The tables above present past performance which is no guarantee of future results and which may be lower or higher than current performance. Returns reflect applicable fee waivers and/or expense reimbursements. Had the Fund incurred all expenses and fees, investment returns would have been reduced. Investment returns and Fund share values will fluctuate so that investor's shares, when redeemed, may be worth more or less than their original cost. Fund returns assume that dividends and capital gains distributions have been reinvested in the Fund at NAV. Index returns assume that dividends from index constituents have been reinvested. Investing involves risk, including loss of principal; please see disclaimers on last page. Please call 800.826.2333 or visit [vaneck.com](http://vaneck.com) for performance current to the most recent month end.

<sup>†</sup>Monthly returns are not annualized. Please note that precious metals prices may swing sharply in response to cyclical economic conditions, political events or the monetary policies of various countries.

**Expenses:** Class A: Gross 1.47%; Net 1.45%. Expenses are capped contractually until 05/01/20 at 1.45% for Class A. Caps exclude acquired fund fees and expenses, interest, trading, dividends, and interest payments of securities sold short, taxes and extraordinary expenses.

### Market Review

The gold price experienced a significant, and possibly historic breakout in June. We have commented extensively about the long six-year base that had formed around the price of gold in the \$1,200 to \$1,300 per ounce range. The technical price ceiling over this base period was \$1,365 per ounce. During June, gold blew through two formidable technical barriers. The first was \$1,365 on June 20, followed by \$1,400 on June 21. It reached a six-year high of \$1,439 on June 25 and finished the month at \$1,409.55 for a gain of \$103.97 (8.0%).

The breakout in gold prices was a global effort. The move through the technical barriers at \$1,365 and \$1,400, as well as the \$1,439 high, all occurred in Asian trading. Support and momentum continued as trading moved to London and New York. Holdings in global bullion ETFs climbed to six-year highs and June saw the largest monthly inflows in three years.

Gold stocks came to life, and the earnings leverage to the gold price that they are known for, historically, was on full display. The NYSE Arca Gold Miners Index saw a 19.1% advance to its highest level in nearly three years. The MVIS Global Junior Gold Miners Index<sup>2</sup> gained 19.3% to reach a 21-month high.

### Outlook

There were several fundamental drivers that enabled gold to break out. Gold saw gains early in the month from continuing trade tensions between the U.S. and China as well as comments from U.S. Federal Reserve Bank ("Fed") officials voicing concerns over the economy. Throughout the month, there was a steady stream of weakening manufacturing data, beginning with the Institute for Supply Management (ISM) Purchasing Managers' Index (PMI)<sup>3</sup> in the U.S. on June 3 and German industrial production on June 8. On June 16, Chinese authorities were reported to be trying to contain the fallout from the failure of Baoshang Bank, as brokerages and asset managers were looking to restrict trading due to possible counterparty risks. On June 18, the European Central Bank (ECB) indicated rate cuts are likely in the absence of

any improvement in the economy. Then markets became convinced the Fed would also cut rates in the second half following the June 19 Federal Open Market Committee (FOMC) statement and press conference, which expressed a more dovish outlook. VanEck Chief Economist Natalia Gurushina characterized the situation as “a race to the bottom among major central banks.” All of this created a consensus shift in the market’s mood and outlook for weaker growth and increasing risks.

Supporting gold were interest rates that continued lower as five-year U.S. Treasuries now carry a real (inflation adjusted) rate of 0%. Ten-year German bunds fell to a record low -0.3%. The U.S. dollar weakened as the U.S. Dollar Index (DXY)<sup>4</sup> fell through near-term support levels.

## Outlook

Gold has begun July consolidating its strong June gains, as Presidents Xi Jinping and Donald Trump agree to resume trade talks and the S&P 500<sup>®5</sup> touches on new all-time highs. The gold market is now transitioning from a six-year sideways price trend. We expect most of August to be a month of consolidation around the \$1,400 level before a new trend begins to develop. Heading into 2020, we see one of two scenarios playing out across the markets:

1. Soft landing – Manufacturing has been weak and on the verge of recession in China, Europe and now the U.S. A “soft” landing would occur if the global stimulus widely expected from central banks is able to keep a manufacturing recession from morphing into a broader recession across the entire economy. Averting a recession would be bullish for the stock market, interest rates would find a bottom, and the dollar would likely stabilize or move higher. This might limit the upside for gold, and in this scenario we might see gold establish a new price range supported by geopolitical risks and central bank demand.
2. Hard landing – A “hard” landing occurs if the current manufacturing recession transitions into a broader economic recession, causing central banks to suffer a loss of confidence. U.S. rates would likely trend to zero or less, and the stock market might enter a correction, while financial risks escalate. Central banks may restart quantitative easing (QE) or initiate other more radical policies. In this scenario, gold would probably form a positive price trend as a safe haven investment.

Last December, the Fed likely completed a rate hiking cycle that lasted three years. The current expansion is now the longest on record, as is the bull market in stocks. Since 1950, a recession has followed 10 of 13 hiking cycles, while three ended in a soft landing. The chart below shows the last recession started three months after the Fed’s first rate cut in September 2007, while the

S&P 500 peaked in October 2007. The prior recession started two months after the first rate cut in January 2001.

Source: VanEck, Bloomberg. Data as of June 30, 2019.

While we are hopeful for a soft landing, a hard landing cannot be ruled out. The market is expecting a new cycle of rate cuts beginning in the second half of the year. Most people take out insurance on their houses, spouses, boats and cars, and the history of hard landings suggests it might be time to think about financial insurance. UBS found that over the last three decades, gold gained in four out of five periods when the Fed was cutting rates.<sup>6</sup>

Source: VanEck, Bloomberg. Data as of June 30, 2019.

Recessions aren’t necessarily gold drivers; however, the financial stress that often accompanies recessions can bring a bull market for gold and gold stocks. Debt or overleverage is usually the culprit, as was seen with subprime mortgages in 2008. The chart shows the household debt bubble of the last cycle has been replaced by a sovereign debt bubble and also a possible corporate debt bubble.

Sovereign debt exploded higher following the financial crisis. Republicans used to be deficit hawks; however, since Trump was elected, deficits have been used to fund tax cuts and more spending. Few in Washington seem concerned, and perhaps it

is a reflection of the mood evolving across the country. A Pew Research Center survey<sup>7</sup> found 48% of Americans said deficit reduction should be a priority, compared with 72% in 2013. Trillion-dollar shortfalls are expected next year and beyond. In a recession, receipts decline and expenses increase, so the shortfall grows further. With no end in sight, we believe eventually there comes a breaking point when foreign and/or domestic investors are no longer willing to buy U.S. treasuries in such quantity. At that point, treasury rates rise, U.S. credit may get downgraded, and the U.S. dollar may collapse. No one knows when the breaking point comes, but a recession increases its likelihood.

The second potential debt problem is corporate. As a percentage of GDP, the chart shows corporate debt has now surpassed the peak of the last cycle in 2009. The key risk in this cycle is lower credit standards. The amount of triple-B rated U.S. corporate debt – the lowest category of investment grade – has more than doubled since the crisis. It now accounts for 55% of the investment-grade market. Morgan Stanley figures that in a downturn, over \$1 trillion of this debt is at risk of being downgraded to junk status. Many funds unable to hold junk debt would be forced to sell.

Another source of risk is the \$1.3 trillion leveraged lending market, which are often packaged into collateralized loan obligations (CLOs). 80% of corporate leveraged loans have weak debt covenants (“cov-lite”), up from 6% in 2006. While banks are in better shape financially since the crisis, 85% percent of leveraged debt is held by non-banks. This suggests that significant systemic risk now rests outside of the banking sector.

As gold advocates, we focus on the risks to the financial system that may impact investment portfolios. In our view, It seems the potential for a hard landing is growing. Meanwhile, we believe debt and poor credit quality have reached levels that may bring another financial crisis.

About VanEck International Investors Gold Fund: You can lose money by investing in the Fund. Any investment in the Fund should be part of an overall investment program, not a complete program. The Fund is subject to the risks associated with concentrating its assets in the gold industry, which can be significantly affected by international economic, monetary and political developments. The Fund's overall portfolio may decline in value due to developments specific to the gold industry. The Fund's investments in foreign securities involve risks related to adverse political and economic developments unique to a country or a region, currency fluctuations or controls, and the possibility of arbitrary action by foreign governments, or political, economic or social instability. The Fund is subject to risks associated with investments in Canadian issuers, commodities and commodity-linked derivatives, commodities and commodity-linked derivatives tax, gold-mining industry, derivatives, emerging market securities, foreign currency transactions, foreign securities, other investment companies, management, market, non-diversification, operational, regulatory, small- and medium-capitalization companies and subsidiary risks.

About VanEck Vectors® Gold Miners ETF (GDX®) and VanEck Vectors® Junior Gold Miners ETF (GDXJ®): An investment in the Funds may be subject to risks which include, among others, investing in gold and silver mining companies, Canadian issuers, foreign securities, foreign currency, depository receipts, small- and medium-capitalization companies, equity securities, market, operational, index tracking, authorized participant concentration, no guarantee of active trading market, trading issues, passive management risk, fund shares trading, premium/discount risk and liquidity of fund shares, non-diversified and concentration risks, all of which may adversely affect the Funds. Foreign investments are subject to risks, which include changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations, and changes in currency exchange rates which may negatively impact the Funds' return. Small- and medium-capitalization companies may be subject to elevated risks. The Funds' assets may be concentrated in a particular sector and may be subject to more risk than investments in a diverse group of sectors.

Diversification does not assure a profit or protect against loss.
