Past performance does not predict future returns.

Performance quoted represents past performance. Current performance may be lower or higher than average annual returns shown. Discrete performance shows 12 month performance to the most recent Quarter end for each of the last 5yrs where available. E.g. '1st year' shows the most recent of these 12-month periods and '2nd year' shows the previous 12 month period and so on.

Performance data for Irish domiciled ETFs is displayed on a Net Asset Value basis, in Base Currency terms, with net income reinvested, net of fees. Brokerage or transaction fees will apply.

The Dutch domiciled ETFs use a gross reinvestment index as opposed to many other ETFs and investment funds that use a net reinvestment index. Comparing with a gross reinvestment index is the purest form since it considers that Dutch investors can deduct or reclaim the dividend tax levied. Please note that the performance includes income distributions gross of Dutch withholding tax because Dutch investors can deduct or reclaim the 15% Dutch withholding tax levied. Different investor types and investors from other jurisdictions may not be able to achieve the same level of performance due to their tax status and local tax rules.

## Key Risks

**Foreign Currency Risk:** Because all or a portion of the Fund are being invested in securities denominated in foreign currencies, the Fund's exposure to foreign currencies and changes in the value of foreign currencies versus the Base Currency may result in reduced returns for the Fund, and the value of certain foreign currencies may be subject to a high degree of fluctuation.

**Emerging Markets Risk:** Investments in emerging market countries are subject to specific risks and securities are generally less liquid and less efficient and securities markets may be less well regulated. Specific risks may be heightened by currency fluctuations and exchange control; imposition of restrictions on the repatriation of funds or other assets; governmental interference; higher inflation; social, economic and political uncertainties. A further risk of investing in this ETF is that the assessment of Chinese financial reports by relevant regulators may not be adequate.

**Risk of investing in smaller companies:** The securities of smaller companies may be more volatile and less liquid than the securities of large companies. Smaller companies, when compared with larger companies, may have a shorter history of operations, fewer financial resources, less competitive strength, may have a less diversified product line, may be more susceptible to market pressure and may have a smaller market for their securities. This is another factor to take into consideration before investing in a China ETF.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on [www.vaneck.com](http://www.vaneck.com).
